Fundamentals of Web Design

This course will introduce delegates to the key aspects of web design and Hyper Text Markup Language (HTML) and how it is used in the creation of documents and pages for the World Wide Web.

Delegates will be taught the essentials skills in how to use HTML and Cascading Style Sheets (CSS) effectively in web design by providing them with hands-on experience of building their own websites. From here they will be able to create their own professional-standard websites and be able to manage their own web presence, whether that is through webpage building or maintenance. During the practical sessions, instructions are provided for the Notepad++ code editor so that by the end of the course delegates will have a thorough understanding of the fundamentals of web design as well as the relevant learning to practically apply what they have learnt.

Course Details

Duration:
2 days (9.30AM – 5.00PM)

Location:
Harrow, London, UK

Price:
£1200.00 + VAT per person
